Facts and figures

BIBUS Holding AG

Founded

1947 by Dipl. Ing. Hans Bibus

Business segments

Technology, Materials, Electronics

Core competencies

Engineering, Logistics, Services

Number of employees

More than 1,100

International locations

On site in 29 countries

Number of companies

51 subsidiaries

A view to solid growth

Guiding principle of the group

Vision

BIBUS Holding AG is continuously expanding its network of established relationships and adding new long-term partnerships. We support the efficiency, competencies and innovative power of our customers with high-quality products and system solutions, customer-specific expertise as well as just-in-time logistics and services.

Mission

Products

We deliver security. The security of having a reliable trading partner and systems provider. The security of being able to rely on first-class, top-quality products, system-appropriate components and customised one-stop solutions.

Engineering

We take on responsibility. The responsibility of a trustworthy supply and development partner. The responsibility of meeting high customer demands with sophisticated solutions, efficient development processes and precise expertise.

Services & logistics

We create trust. Trust in the quality of our services and in the flexibility of our logistics. Trust due to state-of-the-art procedures and technologies, deliveries to exact order, well-founded consulting and support services.

A reliable partner ***BIBUS – Supporting Your Success***

The Swiss company BIBUS Holding AG unites an international network of independent subsidiaries in Europe and Asia. It has evolved from the steel trading company founded in 1947 by Dipl. Ing. Hans Bibus into a progressive group of companies operating in the fields of technology, materials and electronics. Thanks to its reliability and high quality standards, the group has been able to establish itself on the market as a leading supplier and service partner for high-quality industrial products, components and system solutions.

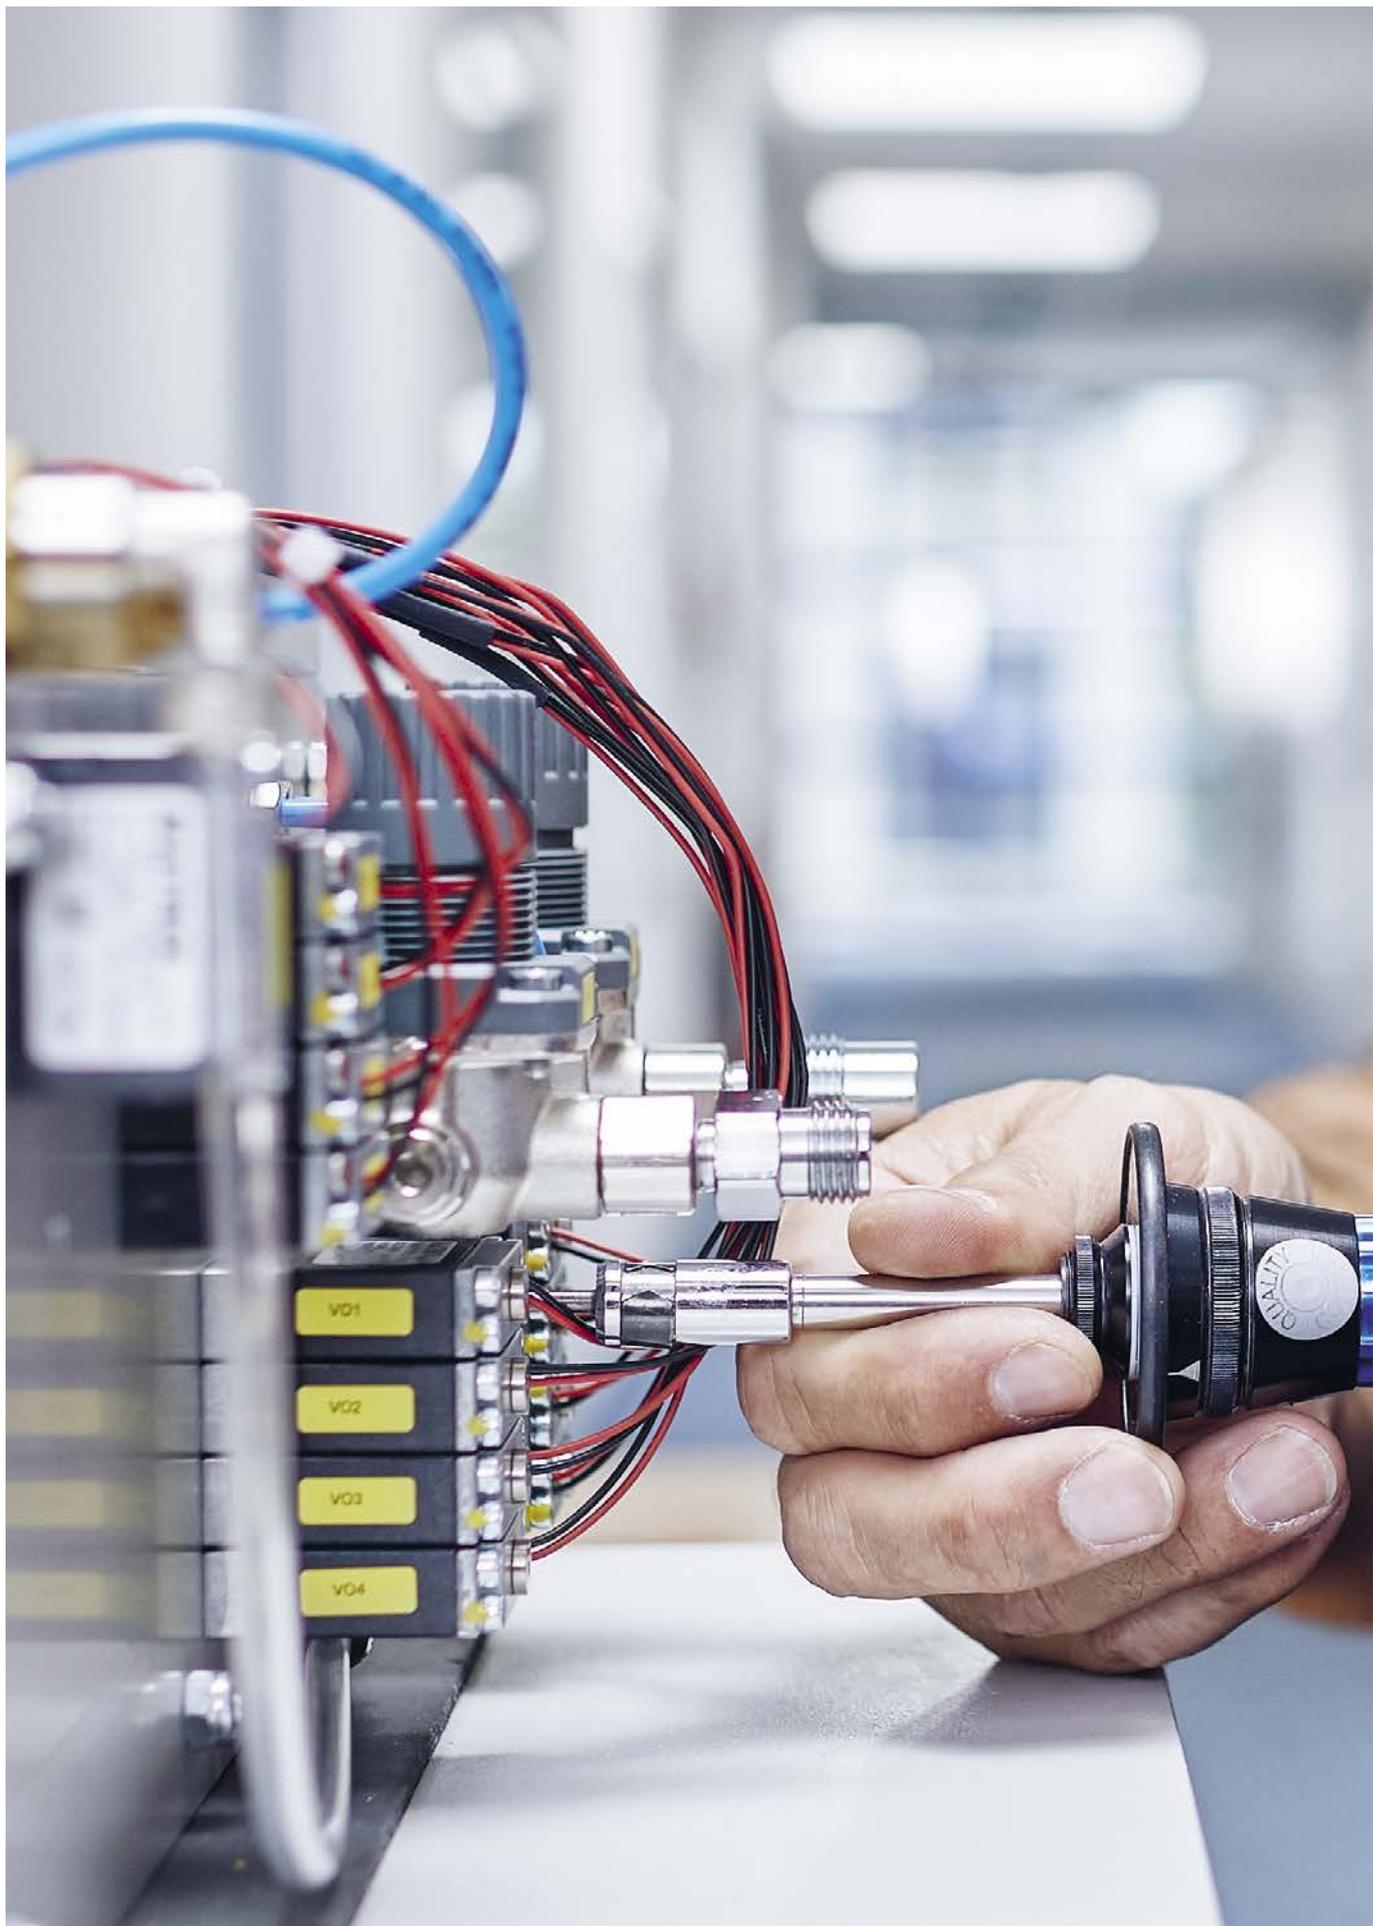

BIBUS Holding grows together with its internal and external partners, vigorously supporting their success. All subsidiaries have access to the expertise and resources of the entire group. For their part, they contribute to the performance of our customers and suppliers with their specific local competencies in the engineering, logistics and services segments.

To ensure BIBUS Holding AG is fit for the future and can ensure sustainable growth and continuity under one roof, it is built on a stable foundation. The four pillars of its success are its character as a family-managed group in the third generation, its solid capital base, long-term business relationships and subsidiaries led by locally anchored managing directors who are often shareholders in the company.

Together with our partners, managing directors and employees, we are committed to a long-term prosperous future based on our principle “Supporting Your Success”. Or as one of our employees has put it: “With our performance, we support the success of our business partners, and that makes us proud.”

Christian Bibus Conrad M. Ulrich-Bibus

Increasing performance *Customer-specific expertise*

The BIBUS Group companies in the technology segment draw on more than 70 years of experience in the fields of hydraulics, pneumatics, mechatronics and system components. This concentrated expertise enables us to meet even the highest expectations and to realise customer-specific orders efficiently and with precision.

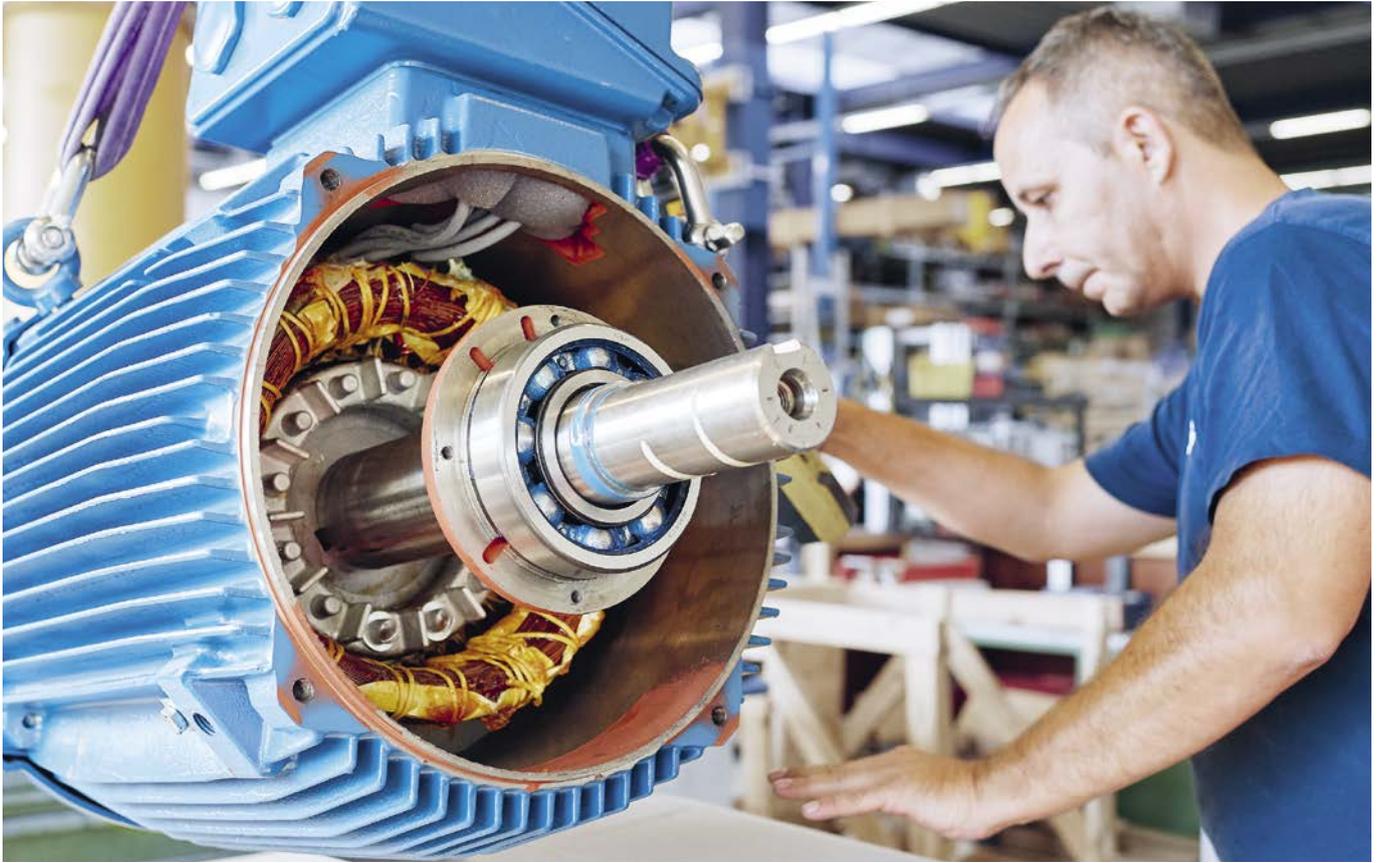

Our offer in the technology segment comprises the sale of high-quality components from well-known manufacturers and the configuration of efficient systems and plant, tailored to the actual requirements of the machine and automotive industry. Always using state of the art technology, the BIBUS subsidiaries also develop and assemble special components of the highest quality, at national and international level, and have these produced by specialists.

The BIBUS Group's qualified technical enterprises stand out for their professional, comprehensive consulting. The trading companies supply the right products in the required quality on the agreed delivery date and at a fair market price. Consistent customer orientation, a wide range of stock and efficient logistics guarantee quick and reliable order processing.

The specialised group companies draw on many years of proven knowledge and qualifications in the field of customer-specific plant and assembly construction, from prototypes to series manufacture. They apply the same level of expertise to the development and construction of whole assemblies and drive systems for stationary and mobile applications, as well as the programming of electronic controls. In addition, the very latest test benches allow for simulations as well as series and individual testing of components and whole systems to ensure their functional and performance capacity.

Product and service range

	Products	Engineering	Service
Pneumatics	Pneumatic components from stock	Planning, development, production and commissioning of pneumatic plants, drive and control systems, development and manufacture of special products, assembly construction, power pack assembly	Upkeep, service and repair of fluid technology products, testing and inspection of components and complete systems, commissioning and training
Hydraulics	Components, assemblies, systems and power packs from stock and from assembly	Customer-specific solutions for mobile and industrial hydraulics from design to planning, engineering and construction up to readiness for series production; complete systems together with intelligent software and hardware solutions	Prototype construction, on-site assembly and commissioning during the development and final phases, after-sales services, many years of product availability in spare parts service
Mechatronics	Motors, gears, controls, couplings, guideways, taper key torque transmissions from stock	Design and assembly of electro-mechanical drives, manufacture of special products	Maintenance, repair and service, spare parts management
	Sensors and switches, safety technology and automation components	Planning, design and construction of systems and plants for the automation of processes, safety and monitoring systems	Maintenance, repair, service, spare parts management and packaging of components ready for assembly
Environmental Technology	Feed pumps for liquid and gaseous media, accessories for waste water technology	Planning and development of systems and plants	Maintenance, repair, service and spare parts management
	AC and DC charging stations for electric vehicles	Planning with/without integration into a management system	Individually tailored, turnkey solutions
	Drinking water protection equipment	Planning and production of equipment to protect against limescale, rust, algae and legionella	Service, remote maintenance and integration into existing protection concepts

Application examples

Automation and handling

Process optimisation and the increasing level of automation of machinery, plants and technical systems make increasingly high demands of the technologies used. Dynamic linear systems, intelligent pneumatics, robust damping solutions, precise grippers and fast sensor systems: With these components, companies from the BIBUS Group's technology segment contribute to the success of efficient production processes.

Machine tool industry

Renowned manufacturers of machine tools from various industries rely on the robust nature and consistent performance of components and systems supplied by the technological companies of the BIBUS Group. Thanks to pneumatic aggregates, hydraulic units, rotary transmissions, shock absorbers, stepper motors and grippers, work pieces and complex shapes can be automatically produced with high precision and manufacturing processes can be optimised.

Hydraulic drives and controls

Also in the hydraulic business segment, the BIBUS Group offers performance from a single source with its complete drive solutions for mobile machinery and industrial applications. Hydraulic, hybrid or electric: the focal point of any cooperation is always the complete solution, including the human and machine interface and electronic control. We accompany the process throughout. That includes everything from initial concept planning to development to series-maturity, right up to training, upkeep and service, plus the complete range of services of a solution-oriented customer support programme.

Environmental and waste water technology

Environmental technology is one of the core competencies of the BIBUS companies in the technology segment, focusing on decentralised waste-water treatment. A complete range of components, special solutions and customer-specific aggregates is available, in the highest quality and in combination with a versatile range of services. Decades of experience and an international network of partners also enable us to find and implement a solution for every assignment.

Stainless steel, aluminium, titanium, nickel, alloys in all supply forms and versions, including packaging

Strengthening competencies

Long-term partnerships

Like all BIBUS subsidiaries, companies in the materials segment maintain long-term business relationships with their customers and suppliers based on true partnership. This is beneficial to both sides: Those who witness the development of their business partners can make a specific contribution to strengthening their competencies.

The BIBUS Group companies Sauter Edelstahl AG, Sauter Metall GmbH, S+D Metals GmbH, BIBUS Metals GmbH, Hartmann Materials AG plus BIBUS Metals AG and their subsidiaries are internationally active enterprises. They supply an extensive network of branches of industry: The machinery and aerospace industries, the metalworking industry, construction and related trades, the chemical and food industry, medical technology, electronics and electrical engineering, environmental, gas and water technology as well as the automotive and petroleum industry.

Whatever our customers' requirements, we can meet them with a comprehensive range of stainless steels, aluminium, nickel and titanium alloys in a great variety of versions, grades and finishes of outstanding quality. Solution-oriented consulting, the state-of-the-art steel and metal logistics centre with its fully automated high-bay warehouse and 5,000 storage places plus a widespread network of logistics partners ensure a reliable quality of service and flexible just-in-time deliveries.

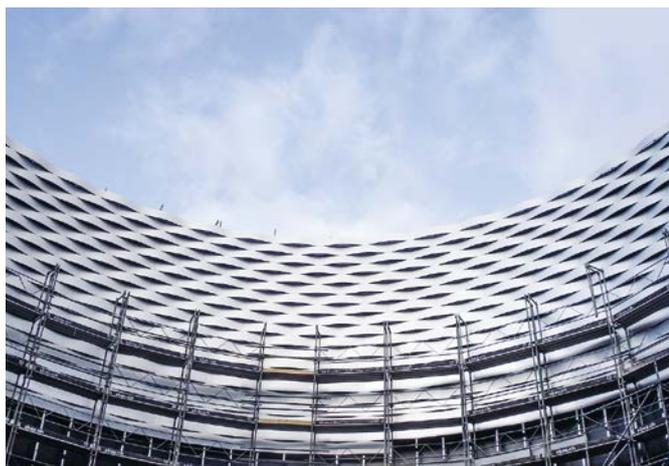

The Group companies in the materials segment cut materials for the processing industry with the very latest machines such as cut-to-length lines, re-rolling systems and sawmills in our Swiss service centre and in additional service facilities in Germany, Poland and China. Thanks to their close cooperation, the Group companies have joint access to comprehensive expertise regarding what is technically feasible. More than 300 employees in the materials segment are committed to using cross-company synergies for the sustainable success of their customers.

Product and service range

	Products	Logistics	Service
Sauter Edelstahl Sauter Metall Stainless steels Duplex materials Aluminium Sheet metal and fittings Profiles Long products Foodstuff fittings	More than 7,000 tonnes of aluminium and stainless steels – coils, sheet metal, pipes, steel bars, fittings and food fittings – in a wide range of grades and versions, special profiles in inox and aluminium alloys – available from stock Fixed formats in aluminium/ stainless steel from the cut-to-length line for formats of 0.5 to 5 mm thick and a maximum of 2,000 mm wide	Modern steel/metal logistics centre with an area of around 15,000 m ² and an integrated service centre Customer orders are produced daily with fully automated warehouse systems and delivered just-in-time with an efficient delivery service; call-off orders and storage at the customer's request	Fixed formats from our own cut-to-length line, special cuts from our plate shear, pieces cut by water jet, aluminium CNC processing, assembly construction Surface finishing/anodising, grinding, brushing, polishing, glass-bead blasting and colour coating Extensive sawmill facility for precision and mitre cutting, special profiles according to customer drawings
BIBUS Metals S+D Metals Hartmann Materials Titanium and nickel alloys Welded material Special stainless steels	Warehousing of over 1,200 tonnes of high-performance materials such as nickel, titanium and their alloys as well as special stainless steels Semi-finished products in the form of sheet steel, strips, rods, wires, pipes and pipe accessories as well as welding materials	Production of components according to customer drawings, turned and milled parts as well as forged parts Compilation of total packages for projects, call-off orders, storage with just-in-time delivery	Cutting service, shearing, sawing, laser cutting, water jet cutting, forging, heat treatment, re-stamping

Application examples

Façade construction

Whether it's a specific colour, special geometries and cuts or a unique surface design – no challenge is too great. Working closely with planning offices and architects, BIBUS Group metal processing companies develop façade and window solutions targeted to meet specific requirements. Thanks to their impressive quality and versatile options, the stainless steel and aluminium products are used for individual manufacture as well as for renowned, large-scale projects.

Medical technology

Medical technology is highly innovative and always changing, making extremely high demands of materials and processing. Top precision and first-class materials such as titanium are required for manufacturing medical technology products. With their technical expertise, high-quality standard products and customer-specific components, the BIBUS companies in the materials segment can meet the highest demands (Medical Certificate: EN ISO 13485).

Aviation

The aerospace industry is supplied, reliably and according to demand, with a wide range of high-performance materials, titanium and titanium alloys together with aviation stainless steels, in the form of semi-finished products and customised products, for static and rotating applications. The comprehensive range meets all demands regarding quality, traceability, certification, internal procedures and supplier reliability. Several Group companies in Europe and Asia have been awarded the EN/AS 9120 aviation certificate.

Food industry

Sheet metal, pipes and tubes, stainless steel bars, fittings, all in a wide range of versions and quality grades – in the field of systems and container construction for the food industry, the BIBUS Group companies in the materials segment offer a range of stainless steels that leaves no wish unfulfilled. Thanks to many years of experience and an excellent supplier base, solutions for special qualities and dimensions can also be quickly supplied.

Robust industrial computers, servers, network products, displays, storage media and electronic components

Promoting innovation *Pioneering solutions*

The success of the Group companies MPL AG and MPI Technologies AG is based on the consistent offer of reliable and robust electronics – focusing on the demands of industry. With their pioneering integrated solutions, these companies have made a world-wide contribution to innovation in technically demanding and extremely robust systems.

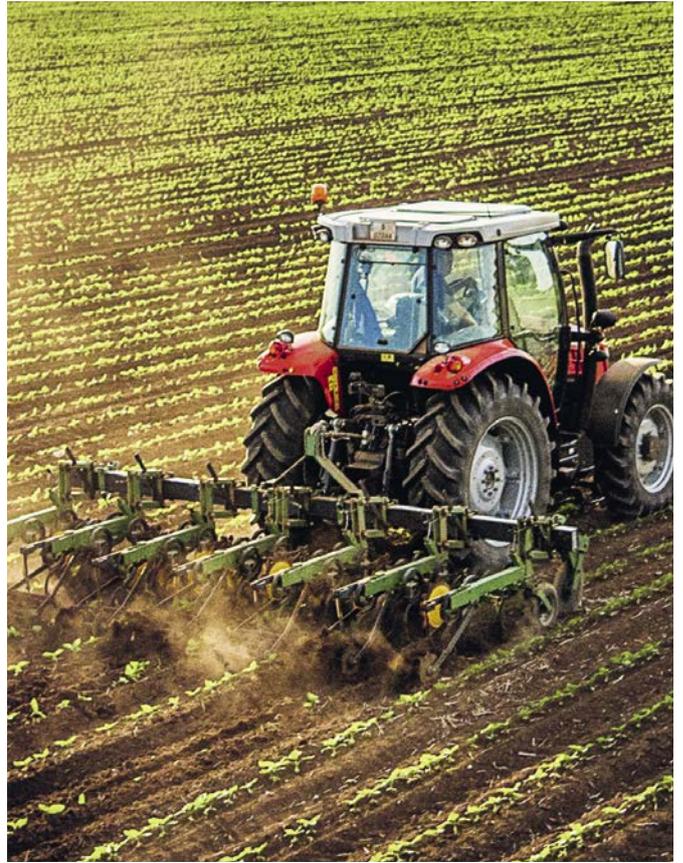

MPL AG develops and manufactures high-quality computers, systems and network products for all industrial demands. The success story of the company is based on a clear product concept: ultra-low power consumption, a wide temperature range and robust design. The solutions developed are innovative and unique, with guaranteed long-term availability. They come without fans and are therefore low-maintenance.

The products and systems have proved their worth a thousand times over and because of their resilience and reliability are often used under extreme and demanding conditions, such as medical, transport and marine technology, as well as in aviation, aerospace and defence. MPL AG is the right choice wherever a truly reliable product is required. In addition, the company specialises in the development of drivers, the support and adaptation of BIOS, LINUX and Windows operating systems and network technologies.

MPI Technologies AG is a leading Swiss provider of robust, reliable IT and IoT systems. Since 1992, the company has been supplying customers from a wide range of industries with customised computing, mobile, display, network and system solutions. At the same time, MPI Technologies AG places great value on supporting projects with the most demanding technical requirements as well as very price-sensitive applications – from robust mobile devices to industrial PCs, gateways and complete display systems to high-voltage components.

Product and service range

	Products	Engineering	Service
MPL AG	<p>Robust, fanless servers, industrial computers and systems with Intel and ARM processors; extremely flexible solutions which can be adapted to customer requirements with standard modules</p> <p>Versatile IP67 enclosures, DIN rail, flange, 19" rack or open as a board solution</p> <p>Complete range of network products such as firewall, switches, media converters; all products are fully developed and produced by MPL in Switzerland</p>	<p>Development of standard products for use under difficult conditions, semi-custom products (M-COTS) and customised solutions</p> <p>Hardware and software development for client-specific applications; expertise in analogue and digital designs, low-power and DSP designs, VHDL and ASIC developments; OEM and complete system solutions</p>	<p>Software support during commissioning, training, repairs</p>
MPI Technologies AG	<p>Robust and reliable IT, network, display and IoT systems for use under demanding environmental conditions with corresponding certification (vehicles, rail, ATEX, medical, etc.)</p> <p>Computers/servers, GPU computing for AI, rugged handhelds/tablets/notebooks, network products for industrial standard/LPWAN/IoT applications, (touch) display solutions, SCADA/HMI software, storage media and components</p>	<p>Development, design and packaging of system solutions including BIOS, operating system and device management</p>	<p>Consulting, development, assembling, software support, testing, roll-out, logistics and repairs</p>

Application examples

Shipping and rail traffic

The development and production of embedded computer systems that withstand the toughest demands on their ruggedness and resilience form the core competencies of BIBUS companies in the electronics segment. Typical applications are shipping and rail transport. Here both private and state principals have for decades relied on products that meet the highest standards, 100 per cent made in Switzerland and not only shock and vibration proof, but also extremely energy-saving.

Avionics and aerospace

Solutions by the BIBUS subsidiary MPL AG are in demand both in the avionics and the aerospace industries. Since 1995, NASA has been acquiring products that withstand harsh conditions from them, including for use in the International Space Station. The BIBUS company also supplies embedded computer and electronics solutions for planes and unmanned aircraft, specifically developed for the demanding avionics environment. The electronic product design provides exceptional mechanical resistance and guarantees the best in reliability combined with top industrial-quality components.

Mobile network technology

Specific examples of the pioneering range of the BIBUS Group electronics segment are the LPWAN (Low-Power Wide Area Network) products, which can be used to network new and existing infrastructure efficiently. Due to their lower energy demands, greater coverage and lower costs than standard available networks, these systems are suitable for a number of M2M (machine-to-machine) and IoT (Internet of Things) applications. The sensors, network products and services of MPI Technologies AG can be used for any process and any medium to be measured or monitored, as they are compatible with third-party sensors and systems.

Industrial automation

Automation, increases in efficiency and production from a single source: the SCADA (Supervisory Control and Data Acquisition) and MES (Manufacturing Execution System) solutions from the BIBUS subsidiary MPI Technologies AG cover a wide range of applications in industrial processes. They are used by leading companies for monitoring, control, visualisation, data recording or alarm setting in complex procedures. Because they are expandable and independent of operating systems, the configurations of innovative software and robust hardware such as computers, HMIs and network products enable optimisation of production, quality and logistics processes.

Company history

Important milestones

- 1947** | *Founding of BIBUS AG, Switzerland, by Dipl. Ing. Hans Bibus.*
- 1952** | *Felix Bibus, the founder's son, joins the company.*
- 1974** | *BIBUS Holding AG is founded.*
- 1987** | *Christian Bibus joins the company.*
- 1989** | *Conrad M. Ulrich-Bibus joins.*
- 1990** | *The first subsidiary outside Switzerland is founded.*
- | *With its shareholding in MPL AG, the BIBUS Group adds an electronics segment to its technology and materials divisions.*
- 1998** | *Shares and the Group management are transferred to the third generation.*
- 2010** | *After Europe and Eastern Europe, the BIBUS Group expands into Asia.*
- 2020** | *With Conrad C. Ulrich, the fourth generation joins the company.*
