COMPETENT PARTNER FOR HARD- &
SOFTWARE SOLUTIONS

Christ Software development

Customized solutions from a single source

As a solution provider, we support our customers both with optimally configured hardware and, if required, with matching software. Your advantage is a „rounded" solution completely from one source. Because our software development experts accompany you through all the relevant steps. This allows you to concentrate on your core business and ultimately receive a solution that optimally meets your requirements.

Software development

Analysis

Test

Requirement

Development

Analysis phase:
Defining the future user through personas.

Requirement Profile:
Requirements specification with detailed description of all tasks of the software.

Development:
Creation of a first variant of the software solution.
The programming of the software is platform-independent.

Test:
Field test after release of the test version.

Repeat the development and testing phase until the result meets the requirements.

Your benefits at a glance:
- Custom development based on your requirements
- No dependencies by handing over the source code
- No long-term commitments due to individual development sprints
- Know-how transfer

Software development services:

| Frontend and backend development | UX-Design |
| Independent of Programming Languages | Digital Transformation | Cross-Platform |
| Tailored advice and solutions |
