KannMOTION - The integrated motor-controller platform

# THE MODULAR PRINCIPLE

The platform KannMOTION - is a powerful motor with integrated control. According to the modular principle, each drive is perfectly tailored to the respective requirement: additional functions or components such as additional peripherals, display or controls are simply added like building blocks.

**Result:** Increase of added value and of the cost performance index. "Customized" is not just a catchphrase, it is a fundamental element of KannMOTION. Only what is really necessary for an application gets integrated. **Conclusion:** The KannMOTION is not made for doing everything, the KannMOTION is made for doing the things what needs to done.

	TYPE	M MAX	INTERFACE <sup>4</sup>	POWER	DIGITAL IN	DIGITAL OUT	ANALOG IN	SPS	SEPARATE POWER INPUT <sup>1</sup>	OPTIONS
KannMOTION	BLDC	According to customer specifications	RS232, RS485 <sup>3</sup> CANopen <sup>3</sup>	According to customer specifications	X	X	X	X	X	Brake resistor, multi-slave operation, galvanic isolation, gearbox, hollow shaft, linear actuator up to IP65, and much more
	DC									
	Stepper motor									

The table is a selection and does not represent the full range of options. Further specifications on request.

1. Separate power input for motor stage and control electronics.
2. In medical applications only after consultation with Adlos AG.
3. Capable of multi-slave operation
4. Further interfaces consultation with Adlos AG
